

WHAT ARE THE POSSIBLE SIDE EFFECTS OF NUCALA?

Like all medicines, Nucala can cause side effects, although not everybody gets them. The side effects caused by Nucala are usually mild to moderate but can occasionally be serious.

Do not be alarmed by the following list of side effects. You may not experience any of them. Ask your specialist or pharmacist to answer any questions you may have.

Always consult your specialist if:

- Your condition changes
- Your symptoms worsen
- You have any questions or concerns about your treatment

VERY COMMON SIDE EFFECTS¹

(these may affect more than 1 in 10 people):

- **headache**

COMMON SIDE EFFECTS¹

(these may affect up to 1 in 10 people):

- **eczema** (itchy red patches on the skin)
- **back pain**
- **pharyngitis** (sore throat)
- **lower respiratory tract infection** (congestion, cough, discomfort)
- **nasal congestion** (stuffy nose)
- **upper abdominal pain** (stomach pain or discomfort in the upper area of the stomach)
- **urinary tract infection** (blood in urine, painful and frequent urination, fever, pain in the lower back)
- **fever** (high temperature)

1. Nucala New Zealand Consumer Medicine Information

Tell your specialist or pharmacist if you experience any of the side effects listed, particularly if they become severe or troublesome, or if you notice any side effects not listed in this booklet.

If you think you are having an allergic reaction to Nucala, stop using this medicine and tell your specialist or nurse immediately or go to the emergency department at your nearest hospital.

Symptoms of an allergic reaction can include rash, itching, hives, or redness on the skin, difficulty breathing and swelling of the face, lips or tongue. Refer to the Nucala Consumer Medicine Information (CMI) for a full list of symptoms.

To report an adverse event involving a GSK product, please contact GSK Medical Information on 0800 808 500.
